

**AMENDMENTS TO THE SPECIFICATION**

Please replace the paragraph beginning on page 6, line 5 (original English translation) with the following replacement paragraph:

At the transmitter end, the output signal  $S_{EVO}$  of the channel oscillator EVO is fed to a transmitter mixer SMESMI. The transmitter mixer is contained in a phase locked loop which contains a controlled transmission oscillator SVO, a phase discriminator PD3 and a low-pass filter TP3, and a signal  $h_{MOD}$  is also supplied to the (third) phase discriminator PD3, in addition to the output signal  $S_{SMI}$ .
